

TROY VALVE

T I M E S

VOL. 10 | AUGUST 2018

What's New at Troy Valve?

There's always something new at Troy Valve. Here's the latest scoop!

It's been an exciting summer here at Troy Valve. We've recently wrapped up filming various parts of our shop and the town of Troy, as well as a few interviews with some members of our team. The idea is to create a short video for our new website (more on that later) as well as a video for us to run at trade shows to help everyone become more familiar with Troy Valve and our capabilities. We will also have hours of extra footage that can be used in any future projects we might undertake.

New Website

We are in the process of a website refresh. Our expectations are to have the new site live in the coming months. Everyone is excited about the design and layout, which should make navigation easier. If there is something you would like to see, please let us know. We can try to integrate your ideas as we work toward completion.

Weftec is fast approaching, and we are all looking forward to our trip to "The Big Easy." This year, we will be displaying our product line proudly and highlighting some of our newest products. We hope you stop by to see us. This year, the booth will be staffed by Mark Powers, Todd Johnson, Kim Perry, and Allyson Colton. It will be Allyson's first trip to Weftec, so please make sure to drop by to meet her.

Product Spotlight

MADE IN THE USA

Stem Guides

Troy Valve stem guides are designed to help extension stems maintain their direction and prevent them from buckling or bending. This is an important part for ease of operation and product life. Adjustable in two directions and bored for your specific application, Troy Valve stem guides are always a perfect fit. Choose from: Cast 316 Stainless Steel, Ductile Iron, with a position indicator, or with a split bushing. Reaches start at 2.5 inches from wall to centerline of the stem. We have made reaches as far as 7 feet!

▶ Employee Recognition Corner

Earl Campbell Tool Maker

How long have you worked at Penn-Troy?

34 years in January

What are your position and common daily duties?

Tool Maker. Making tooling and fixtures

What do you like most about your job?

The independence

What are your hobbies?

Hunting, fishing, metal detecting, camping

Do you have a vacation ritual or location?

I love fishing and hunting whitetail deer up North

What is your favorite movie?

The Mountain Men with Charlton Heston and Brian Keith

Any bucket list item(s) you care to share?

Go back out West again

Do you have any hidden talents?

Woodworking and knife making

Family?

Married for 33 years to my wife, Bettina. Two children (boy and a girl), nine grandchildren

How do you unwind outside of work?

Fishing and hunting with friends

▶ Volume 10 Contest

Anyone wishing to participate in our contest should email a picture of any of our products in the field to sales@penntroy.com. Please use the word **CONTEST** in the subject line.

All those submitting correct entries will be contacted and given a Troy Valve hat and t-shirt.

*No names and/or locations will be published. No entries will be used in future issues without consent.

▶ A Message From the President

Thank you again for taking time to read the *Troy Valve Times*.

I was recently reminded by LinkedIn that I have been in my official capacity with Troy Valve for eight years now, and it got me thinking back to those early days. I remember feeling at the time as if our product line was very small compared with those of other companies, and I certainly did not feel confident asking for the time and attention of our customers to talk about my products.

Since that time, I have worked with customers, talked with engineers, and even spent a lot of time at sewer plants troubleshooting situations. I have learned more about these valves than I ever imagined I would, and I truthfully still get a thrill every time someone sends us a picture of one of our valves from the field.

The most important thing I have learned from all of this is how vital our valves are to the success of our customers' operations. Controlling wastewater throughout the treatment process is extremely critical, and I am honored by the essential role that our valves play. Thank you to everyone who helped teach me these valuable lessons, and I look forward to many more years of learning from you all.

Sincerely,

Mark Powers
